

Here's how to put the freeze on payouts for spoiled food due to power interruptions...

Oki's Power Fail Alert sounds immediately if a power interruption occurs.

Your clients who rely on refrigerated stock can take prompt action to rectify the problem, so there's no food spoilage and *no insurance claim*.

Any number of things can cause a power interruption – even the tripping of a safety switch – and very often the event goes unnoticed until losses have occurred.

An early warning can save thousands...

With Oki's Power Fail Alert monitoring fridges and freezers in insured premises, an loud alarm sounds immediately if the power supply to any of the units stops.

This alarm allows your clients to take prompt action to rectify the problem before their cold stock warms-up – before frozen food defrosts – and before losses occur.

The alarm can sound wherever it's required...

The alarm can be fitted to each individual appliance, or located some distance away to give your clients the convenience of monitoring at a central point such as an office or control booth.

Options for the best protection...

Oki's Power Fail Alert is a compact 12 volt DC unit. It can be hard-wired to each fridge and freezer, or plugged-in to a particular circuit to warn if power supply to that circuit is interrupted.

A&J Waaldyk Electrics or your client's own electrical contractor will be pleased to advise whether hard-wired or plug-in is the best option for their premises.

Advise your clients – and consider offering a premium reduction – to install Oki's Power Fail Alert to protect their business from inconvenient and costly stock loss – and put the freeze on your company's payouts for spoiled food.

The technical information:

❑ Oki's Power Fail Alert is connected to a 240 volt supply via a step-down transformer.

❑ Just 67mm W, 130mm H, 25mm D, the unit's compact design lets it fit easily to any appliance.

❑ The 'power on' LED shows the unit is operating and the test button lets you interrupt the power supply to hear the alarm.

❑ The on/off switch on the rear lets you activate/deactivate the unit.

❑ If power interruption is detected, the alarm will sound continuously for up to 5 days until the power supply is restored.

❑ The only maintenance required is to simply renew the 9 volt battery each year.

(In the event that a refrigerator's compressor fails, the alarm will not sound as the power supply to the refrigerator is not affected.)
